**AVUE™ | BITE**  
Bite Registration Material

**AvueBite is Addition silicon based bite registration material with Exceptional accuracy and thixotropic characteristics. It captures an accurate representation of the occlusal relationships with high end hardness, with its Unique Mixing tip material can be spread into uniform thickness.**

**ADVANTAGES :**

- » It is a soft, thixotropic, patient-friendly material with a neutral taste
- » AvueBite flows smoothly-No bite resistance
- » Exceptional Accuracy-On first attempt
- » High dimensional stability-Minimal disortion
- » Outstanding elastic recovery-Reduced risk of breakage
- » Easy to apply-Not technique sensitive
- » VPS-based bite registration material  
High final Shore[A] Hardness
- » Not brittle-Easy to cut/contour with Scalpel
- » No Rebound-Accurate Positioning of Stone Models

**INDICATIONS :**

For bite registration: registration of centric occlusion.  
Material for application on bite forks for use with facebows.

**TECHNICAL DATA :**

Working Time	20 seconds
Setting Time	50 seconds
Hardness (Shore A)	93

**PACKAGING :**

2 x 50 ml Cartridges
